## Djokovic's dominance continues, wins 11th Grand Slam title

MELBOURNE, Australia - Novak Djokovic left no room to question his dominance on Sunday night. The 28-year-old Serbian defeated No. 2 Andy Murray in straight sets, 6-1, 7-5, 7-6, en route to his third-straight Grand Slam title and 11th overall.

This is his sixth Australian Open title, a record among the men's singles field. Four of those six have come against Murray.

Djokovic has now won 21-straight matches in Grand Slams, dating back to the start of Wimbledon last year. He only lost one Grand Slam match in 2015, when Stan Wawrinka beat him in the French Open final. The only thing missing from Djokovic's trophy case is that elusive French Open crown.

The win moves Djokovic into a tie with Roy Emerson for most titles at the Australian Open and into fifth place on the list of all-time Grand Slam titles. He shares fifth place with Bjorn Borg and Rod Laver. Only Roy Emerson, Pete Sampras, Roger Federer, and Rafael Nadal have more.

"Fighting for a Grand Slam trophy is a pinnacle of our sport. This is exactly where you want to be," Djokovic said.

"You work hard to put yourself in this position. Of course, adding to that the fact that I am able to make history is just an additional encouragement and incentive for me to do well."

"If you want to win Grand Slam titles and be the best in the world, you have to win against the best players in the world. Going to be ready for that."

Can you solve this math problem?

If...

$$1 = 5$$

$$2 = 10$$

$$3 = 30$$

$$4 = ??$$

Join all the dots using four straight lines and without lifting your pencil.
